

WEBSITE DESIGN & DEVELOPMENT BRIEF

Portfolio Website for Amegah - *Director, Cinematographer & Photographer*

Suggested www.amegah.com

1. OVERVIEW

The design and development of a professional portfolio website for a creative professional working across Directing, Cinematography and Photography.

The primary purpose of the website is to function as a strong visual portfolio that can be easily updated without requiring a developer every time a new project, image, film, credit or client needs to be added.

The website should feel high-end, editorial, cinematic and visually led, while remaining simple and intuitive to navigate. The work itself should be the primary focus.

The website needs to communicate:

- Creative identity
- Professional credibility
- Quality and range of work
- Directing portfolio
- Cinematography portfolio
- Photography portfolio
- Selected Partners
- Selected clients
- Contact information (Phone Number, Email)
- Social Media (Instagram)

2. PRIMARY OBJECTIVE

- The website should serve as a digital portfolio that can grow over time.
- I should be able to update the portfolio myself easily after the website is launched.

This includes being able to:

- Add new projects
- Remove/archive projects
- Edit project information
- Upload photographs
- Add videos
- Add client information
- Rearrange featured projects
- Update biography
- Update contact information
- Add new portfolio sections when necessary

3. DELIVERABLES / WEBSITE STRUCTURE / FLOW

The final project should include:

Design

- Homepage
- About (Headshot and Biography)
- The three major Categories of work (Director, Cinematographer, Photographer)

Filters and Categories below

Cinematographer

- Music Videos
- Ads
- Documentaries
- Short Films
- Events [Corporate, Weddings(Traditional Weddings + White Wedding), Parties, Funerals]

Director

- Music Videos
- Ads
- Short Films

Photographer

- Portraits
- Lifestyle
- Editorial

- Partners
- Clients
- Contact information (Phone Number, Email)
- Social Media (Instagram)

4. VIDEO

My preference is for a system that provides high-quality playback while maintaining website performance.

Videos should ideally support:

- Autoplay where appropriate
- Muted playback for background/showreel use
- Poster/thumbnail images
- Fullscreen playback
- Mobile compatibility

5. MOBILE EXPERIENCE

The mobile experience should not simply be a compressed version of desktop.

Please pay particular attention to:

- Image cropping
- Typography
- Video playback
- Navigation
- Touch interaction
- Gallery scrolling
- Loading speed
- Project transitions

The portfolio should look excellent on:

- Desktop
- Laptop
- Tablet
- Mobile

6. TYPOGRAPHY

- Strong and simple typography (suggest serif fonts)
- Minimal text
- Excellent readability

Please recommend 1–2 typeface combinations.

7. COLOUR

- Black Background
- White for main texts
- Off-white for subtexts
- Grey Accents

8. SOCIAL MEDIA INTEGRATION

The website should link to relevant social profiles.

At minimum:

- Instagram

9. WEBSITE OWNERSHIP

All final website assets should belong to the client.

This includes, where applicable:

- Website design
- Website content
- Project data
- Uploaded images
- Uploaded videos
- Custom code
- Website files

The website should be structured in a way that removes dependence on the designer for routine content updates.

11. KEY SUCCESS CRITERIA

The website will be considered successful if:

1. The work looks exceptional.

Photography and film should remain the dominant visual experience.

2. Navigation is effortless.

A visitor should immediately understand who the creative is and what they do.

3. The three disciplines are clearly represented.

Directing, Cinematography and Photography should feel like distinct practices while still belonging to one creative identity.

4. The website is easy to update.

Adding a new project should not require a developer.

5. The website is fast.

Large visual assets should not compromise performance.

6. It works beautifully on mobile.

A significant percentage of portfolio traffic may come from Instagram and mobile devices.

7. It feels premium but not generic.

The design should have a distinct point of view rather than looking like a standard portfolio template.

8. The architecture is scalable.

It should be able to accommodate significantly more projects over the next several years without requiring a redesign.
